

Here is the rear seat after being wiped with Prestine Clean.

Afters of the passenger seat (Leatherique was allowed to dwell for 5 hours in the sun, at about 85 degrees out).

Here are a couple half and halves of the drivers seat..

I had noticed that while most of the dirt was removed (easily) the seats still felt a little dry and there were some spots that needed a second application. I applied a coat of Rejuvenator Oil early the next morning and left the Trans Am in the sun the entire day. Not only are the seats and leather amazingly soft and supple, but the car (the next day) is beyond amazing. Also, all the dirt and grime came off (and out from the inside). It is truly a transformation!

Re: Product Review: Leatherique Leather System

Here are a couple "in progress" shots of Brian and I using the products in our clients' cars..
